The final races of the 2018 DTM season at the Hockenheimring promise to be thrilling for fans and Schaeffler driver Mike Rockenfeller

Touring car elite +++ Hockenheim +++ All races +++ Team +++ Driver +++ Car +++ Partner Audi +++ This is the DTM +++ Interview with executive board members +++ History: Schaeffler in the DTM +++ Schaeffler and the IC engine +++ Strategy: mobility for tomorrow +++ Facts and figures +++ Race track +++ Schedule +++ Contacts

# Editorial

One thing is clear after René Rast's four recent consecutive wins: The Audi teammate of Schaeffler driver Mike Rockenfeller has the chance to defend his 2017 driver's title at the 2018 DTM season finale at Hockenheim.

For Rockenfeller, however, the title is out of reach this year. Instead, he will lend as much support as possible to his brand colleague Rast at the Hockenheimring. After his seven straight top ten results, Mike Rockenfeller is a hot candidate for podium spots at rounds 19 and 20 of the season. We at Schaeffler wish him every success in the exciting final spurt and we highly recommend a visit to the track to witness the action. This brochure provides you with all the important information and facts.

# The touring car elite

Some of the world's most notable drivers fight gripping duels in high-tech race cars with more than 500 horsepower on race tracks throughout Europe

The internationally most popular touring car series has been captivating fans since 1984 with a mix of attractive motorsport and a program featuring a variety of entertainment. Three German premium manufacturers pitted against each other in high-caliber racing, an enhanced event calendar, two races per weekend, six different countries hosting the DTM – the overall conditions for the 2018 season could not be better.

Even in the DTM's early years, Schaeffler supported drivers and teams with its motorsport and technical know-how, emphasizing its passion for technology. Since 2011, the company has been giving its name to the Schaeffler Audi and has celebrated major successes including two title wins. This season, Schaeffler, Audi, Phoenix Racing, the Schaeffler Audi RS 5 DTM and driver Mike Rockenfeller are again forming a unit that promises to deliver success.

# #DTMHockenheim

Hockenheim–Herzogenaurach

249 km

A small German town with a big name in the worldwide motorsport scene – that's Hockenheim

## Country and people

Hockenheim is located in the Rhine-Neckar county not far from Mannheim, the "cradle of the automobile" where Karl von Drais in his day invented the "draisine" running machine and Carl Benz developed the first automobile with an internal combustion engine. The 55-kilometer long Kraichbach river divides Hockenheim into two parts. In 2019, the town will celebrate the 1,250th anniversary of its first official mentioning in the "Lorscher Codex," the volume of official documents of the Abbey of Lorsch.

## Mobility

Hockenheim's population of some 20,000 residents benefits from the town's geographic location with good travel connections in the Northern Baden's Upper Rhine valley. Two freeways, A6 and A61, are routed directly past Hockenheim and A5 is just a few kilometers away. As a result, in spite of its small area of only 35 square kilometers, Hockenheim is one of Germany's most important "automobile towns." A train station, connections to federal roads and two country roads plus the nearby regional airports in Speyer and Mannheim underpin the town's central location.

## Race track

Initially established in 1932 as a triangular track of some twelve kilometers in length on unpaved trails in the Hardtwald forest, the Hockenheimring went on to become one of the country's most important race tracks. In the DTM, the Grand Prix circuit enjoys a special role as well. Ever since the racing series' relaunch in 2000, it has, with one exception, been hosting both the opening and the final event each season. With 88 races the Hockenheimring ranks ahead of the Nürburgring (79) as the most frequently used DTM track.

## 1 & 2

### Rocky in contention at the front

May 5/6, 2018

With his second place clinched in race two Mike Rockenfeller was the best Audi driver in the season opener at Hockenheim. In the drivers' standings he is in third position tied on points with another contender.

Hockenheim Germany

Hockenheim Germany

### Showdown

October 13/14, 2018

The grand finale not to be missed: In nine of the past 15 seasons, the DTM title was only awarded on the last race weekend.

# 19 & 20

## Drivers' standings

Pos.	Driver	Manufacturer	Points
1	Paul Di Resta (GB)	Mercedes-Benz	229
2	Gary Paffett (GB)	Mercedes-Benz	225
3	René Rast (D)	Audi	199
4	Marco Wittmann (D)	BMW	143
5	Edoardo Mortara (CH)	Mercedes-Benz	139
6	Timo Glock (D)	BMW	127
7	Lucas Auer (A)	Mercedes-Benz	118
8	Pascal Wehrlein (D)	Mercedes-Benz	108
9	Philipp Eng (A)	BMW	98
10	Mike Rockenfeller (D)	Audi	79

## Teams' standings

Pos.	Team	Points
1	Mercedes-AMG Motorsport PETRONAS	333
2	Mercedes-AMG Motorsport REMUS	290
3	SILBERPFEIL Energy Mercedes-AMG Motorsport	257
9	Audi Sport Team Phoenix	123

## Manufacturers' standings

Pos.	Manufacturer	Points
1	Mercedes-Benz	865
2	BMW	563
3	Audi	483

Lausitzring Germany

### Damage limitation

May 19/20, 2018

On a weekend that was difficult for Audi across the board, Schaeffler driver Mike Rockenfeller still managed to stand out. In race two, Rocky took eighth position.

## 3 & 4

Norisring Germany

### Spearhead

June 2/3, 2018

With a fourth place scored in race two at the Hungaroring that was heavily influenced by the weather Rocky defended his top spot within the Audi lineup.

## 7 & 8

### No points

June 23/24, 2018

For the first time this season, Rockenfeller goes home from a weekend completely empty-handed. The highlight: his best time in the second free practice.

Budapest Hungary

## 5 & 6

## 13 & 14

### In good form

August 25/26, 2018

Mike Rockenfeller finishes both of the first night races in DTM history in the points. His performances in the qualifying sessions are impressive as well.

Misano Italy

Zandvoort Netherlands

## 9 & 10

### Misfortune for Rockenfeller

July 14/15, 2018

In race two, while lying in fifth place, Mike Rockenfeller's car suffers a puncture. However, on setting the fastest race lap, Rocky shows his potential.

Nürburgring Germany

### Fair to middling jubilee

September 8/9, 2018

The round on Saturday was Mike Rockenfeller's 150th DTM race: sixth place, eight points, and none on Sunday: a braking mistake, later on a spin and finished only in 13th position.

## 15 & 16

Brands Hatch Great Britain

## 11 & 12

### Countable success

August 11/12, 2018

After two events without points, Mike Rockenfeller finishes in the top ten twice. In the aggregate of the two races, he makes up eleven positions after starting from the grid.

## 17 & 18

### Back on the podium at last

September 22/23, 2018

At Saturday's race, Mike Rockenfeller finished second just behind his Audi colleague René Rast. On Sunday, Rocky was blocked in qualifying, and came from P13 to finish P8.

Spielberg Austria

Prof. Peter Gutzmer (right), Deputy Chief Executive Officer and Chief Technology Officer of Schaeffler AG, and Matthias Zink, CEO Automotive of Schaeffler AG, in an interview

# 3 questions for ...

... Prof. Peter Gutzmer and Matthias Zink

*As far back as in the 1980s, DTM cars were racing with stickers of Schaeffler's LuK brand and since 2011, an Audi fully wrapped in Schaeffler's colors has been attracting attention. What's the objective that drives this commitment?*

*Peter Gutzmer: "Schaeffler has always been an innovation driver. About three decades ago, we extended our commitment from the factories to the race tracks in a manner of speaking in order to present our brands in the competitive environment of motorsport. Many cars not only in the DTM but also in other motorsport disciplines such as rally racing were emblazoned with logos of Schaeffler's LuK, FAG and INA. Today, we're communicating our brand values in motorsport under the 'One Schaeffler' theme. In addition, motorsport not only reflects the competitiveness of our products, but also strengthens the skills of our young engineers who increasingly often join us with experience from the Formula Student engineering design competition."*

*Talking about technology transfer: The technologies in race cars and production automobiles are frequently not so far apart from each other. How do these two fields benefit from each other?*

*Matthias Zink: "The complexity and speed in motorsport commitments sharpen the focus on what's essential and require our engineers to deliver feasible solutions at a fixed point in time. In addition, motorsport promotes team spirit. All this is beneficial for Schaeffler's daily work as a globally active automotive and industrial supplier as well."*

*As an official technology partner of Team Audi Sport ABT Schaeffler you are active in the Formula E electric racing series as well. This is a totally different field particularly in terms of the type of powertrain. IC engines and electric mobility – how do these two fit together in a portfolio in your case?*

*Peter Gutzmer: "Electric mobility is our future but, this said, electric mobility is the future of the IC engine as well. As many studies have shown, we're not going to achieve the envisioned targets by 2050 with purely battery-based electrification. Looking at it from the perspective of total systems, this will only be possible if we create CO<sub>2</sub>-neutral energy carriers using renewable energy sources which can ideally be achieved in an IC engine system. The future of our personal mobility will be defined by a sound mix of hybrids, efficient IC engines and electric powertrains."*

## Champion makers

From small stickers to full vehicle branding – Schaeffler has been progressively extending its DTM commitment over the past 30 years. Success in racing has proved the company right

### The beginnings

*The logo of Schaeffler's LuK product brand is featured on Kurt Thiim's racing suit and car, among others. In the first event, at Zolder in 1986, the Danish rookie races from second on the grid to victory. At the end of the season, Thiim even wins the title. In the following DTM years, the LuK, INA and FAG logos can be seen on many other cars of the Alpina, Audi, BMW, Ford, Mercedes-Benz and Opel marques and on the racing suits of their drivers.*

### 2011

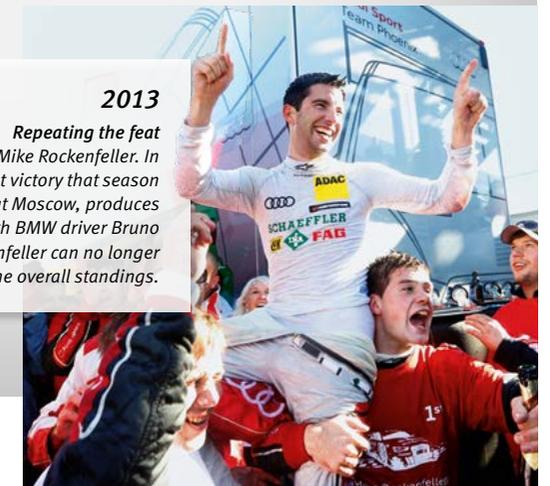

#### Triumph in Schaeffler's colors

*For the 2011 season, Schaeffler concentrates its commitments and becomes the naming sponsor of a full race car of Audi Sport Team Phoenix. The Schaeffler Audi A4 DTM sporting conspicuous colors and dubbed "Caipirinha express" in the hands of campaigner Martin Tomczyk turns out to be a guarantee for points. In all ten races of the season, the Bavarian driver claims a place in the top five, celebrating three victories in the process. At the end of the season, he scores the title win. The whole Schaeffler Group is the champion in its DTM debut year.*

### 2013

#### Repeating the feat

*In the 2013 season, the Schaeffler campaigner's name is Mike Rockenfeller. In just his second race, at Brands Hatch, he celebrates his first victory that season and takes the lead of the standings. Victory number two, at Moscow, produces an early decision in Rocky's favor in the title race with BMW driver Bruno Spengler. After the penultimate event at Zandvoort, Rockenfeller can no longer be bumped from the top spot in the overall standings.*

# Efficiently into the future

In the medium term, 70 percent of all newly registered vehicles – hybrid models included – will have an IC engine on board, according to a forecast by a Schaeffler scenario for 2030. In the light of future climate and emission targets, it is all the more important to make established powertrain technology fit for the future

For the globally active automotive and industrial supplier, it is clear that an either-or philosophy will not be sufficient on the road toward mobility for tomorrow. “Important keys to success lie in the ability to think systematically and in ambidexterity, the gift of acting with ‘both hands.’ This means continuing to develop the things that have proven viable while breaking new ground at the same time,” explains Prof. Peter Gutzmer, Schaeffler’s Chief Technology Officer.

The further development of things that have proven viable include, for example, rolling bearings for engines and transmissions with particularly low friction, as well as mechanically and electronically optimized control systems such as the UniAir fully variable electrohydraulic valve control and electromechanical camshaft

adjusters or VCR systems enabling variable compression ratios. Another highly attractive and effective technology: Schaeffler is testing three-cylinder engines with so-called rolling cylinder deactivation where a different combustion chamber is shut off after every four cycles. This is where Schaeffler’s patented dual-mass flywheels with pendulum-type absorbers for vibration absorption are utilized as well – an invention that for many years has been responsible for perfectly smooth running of ICE powertrains in a wide variety of configurations. In addition, it enables driving in particularly low engine speed ranges and thus yields additional savings potential.

## 45 percent efficiency realistic

In spite of continuous improvements, it is also clear that without additional electrification of the

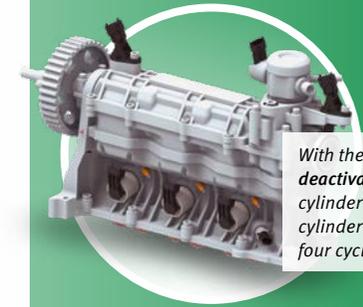

powertrain the IC engine will not be able to comply with future emission limits. Schaeffler has developed a large number of production solutions in this context, ranging from the thermal management module derived from the internal combustion engine to electric clutch systems to 48-V and hybrid technologies.

In 2030, Schaeffler expects that annual production just of so-called P0 hybrid drives, in which the electric motor is connected with the crankshaft of the IC engine via a belt, will amount to some 20 million units. These belt-driven starter-generators make it possible to recuperate braking energy to be stored in small, cost-effective lithium-ion batteries. The recovered energy can be used to restart the engine in start-stop or in coasting modes and to boost acceleration. To enable the dynamic alternation between various operating modes, Schaeffler, among other things, developed an electrically operated active belt tensioner. With these technologies Schaeffler expects that an efficiency increase of gasoline engines to 45 percent is realistic. That would raise it to the level of modern diesel units.

An important aspect of looking at efficiency is that Schaeffler goes beyond the consumption of the powertrain, instead considering the entire energy chain of mobility, from well (source) to wheel. In terms of emissions, the IC engine no longer compares so poorly with its electric competition if the analysis is based on the current electricity mix in which fossil fuels throughout the EU account for 44 percent. But even a complete switch to electricity produced from renewable sources would not necessarily mean the end of the IC engine. The combustion of synthetic fuels produced with green electricity is low in emissions and CO<sub>2</sub>-neutral. Synthetic fuels achieve a vehicle range comparable to that of fossil fuels and can be easily sold via existing filling station networks.

“Crucial for success is a holistic view of the powertrain and the interaction of the electric motor, the internal combustion engine and the related infrastructure,” explains Matthias Zink. “With its expertise in electric mobility as well as in engine and transmission systems and chassis Schaeffler is superbly positioned.”

## More efficiency – innovative technologies from Schaeffler

*With the rolling cylinder deactivation of a three-cylinder engine a different cylinder is shut off every four cycles*

*Electromechanical camshaft adjusters offer higher adjustment speeds than hydraulic systems*

*Electromechanical belt tensioners enable dynamic variation of the engine’s operating modes*

*The UniAir fully variable valve train system delivers the optimum amount of air to the combustion chamber for every operating point*

# Mobility for tomorrow

For Schaeffler, innovation has been part of its corporate DNA ever since the company was founded. Lateral and interdisciplinary thinking is part of the program

Schaeffler is known as an innovation leader delivering a wealth of technologies that make automobiles more fuel-efficient, environmentally friendly and safer. Additionally, the company offers products for trains, aircraft, wind turbines and many other industrial sectors. Schaeffler can be found wherever things are in motion. And motion means mobility as well. The challenges facing mobility of the future are immense. That's why Schaeffler is committed to its holistic "Mobility for tomorrow" strategy concept geared to finding sustainable solutions for the world of tomorrow.

**"Progressive climate change, increasing urbanization and globalization, as well as digitalization will have a substantial impact on our lives and work. This particularly applies to the field of mobility"**

Klaus Rosenfeld,  
Chief Executive Officer Schaeffler
